

How to Use AppsAnywhere

AppsAnywhere is a software portal that gives MCEC students convenient access to academic software from their own computers. Instead of visiting a physical computer lab, users can access supported applications through a single website. Depending on the application and device, software may be installed, streamed, or accessed remotely, making it easier to complete coursework anytime, anywhere.

To use AppsAnywhere, Login at <https://appsanywhere.mcec.sc.edu/> with your University login.

After install is complete, select “I have completed installation.”

Your download has started

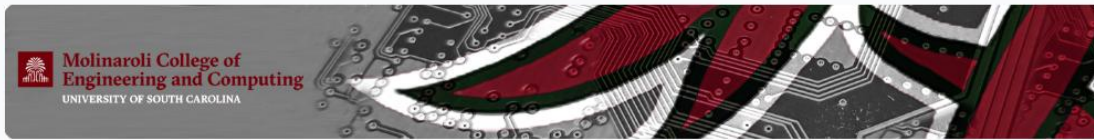

To access AppsAnywhere, just install the software. You only need to do this the first time you visit AppsAnywhere on each device.

- 1** The download should start automatically.
If it hasn't after 5 seconds:
 [Download for Windows](#)
or, [Download for macOS](#)
- 2** When the download has finished, click Run to launch the software.
- 3** Click Next until Done appears.

Large applications may take a few minutes to launch.

The Cloudpaging Player will show currently running and recently used applications.

The application will start on your computer. Some applications may require connection to USC VPN to license the application. The on-screen prompt will indicate if VPN is required.

Launching app

Creo Parametric 10

from PTC

Notice: In order for Creo Parametric 10 to work, you **must** be connected to the University VPN or eduroam. The VPN can be downloaded from my.sc.edu/software under Software for Personal Use > Security > Cisco AnyConnect VPN for Students - Personal Use

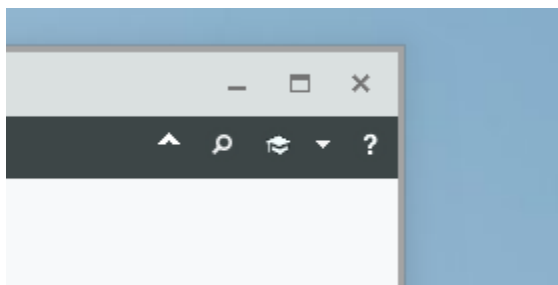

Cancel launch

Continue

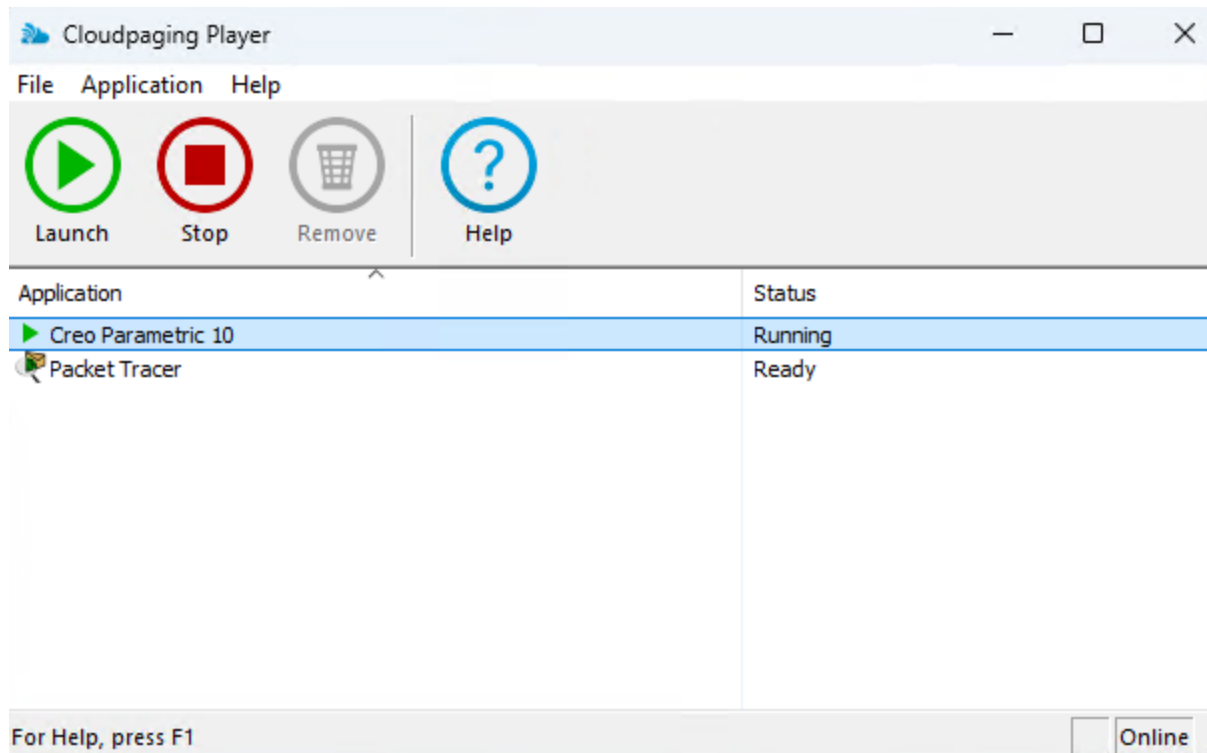

The selected application will launch.

Close the application as usual to exit.

And click stop in the Cloudpaging Player.

For applications that have been used previously, just click launch in the Cloudpaging Player to start the application again.
